

## Why choose us?

### **We're profit-for-purpose.**

Any profit we make is reinvested into our mission and our region.

### **We're trusted locals.**

Successfully delivered multimillion-dollar projects for the Australian Government across two decades.

### **We're respectful collaborators.**

Committed to providing and facilitating pathways for Noongar people to uphold their traditional rights and responsibilities to care for their Country.

### **We're independent.**

We're non-government and not-for-profit which makes us agile, responsive and adaptable.

### **We're science-based.**

We're a team of environmental scientists, published researchers and agricultural experts with close connections to academic and development organisations.

### **We're landscape-scale.**

That means we aim for impact beyond the local, to the regional for bigger picture outcomes.

## About us

South West NRM works to address the triple threat of climate change, biodiversity loss and ecosystem degradation in one of the most biologically rich, yet threatened environments on earth ... our South West.

The region we call home stretches across 4 million hectares of wildly diverse landscapes and ecosystems – from world-renowned coastlines, to towering old growth forests, internationally-significant wetlands and mighty rivers, inland salt flats and 108 nationally-listed threatened species.

We're committed to nurturing it all for a future in which people and planet thrive. With our partners, we operate at the intersection of science, technology and landcare, across natural and agricultural landscapes. We deliver evidence-based solutions for creating healthy ecosystems as well as improved productivity and sustainability for farmers.

Over 20 years, we've planted millions of seedlings, rehabilitated thousands of hectares of degraded land and protected our region's iconic threatened species.
